

LONG HAUL

Cut unnecessary journey costs for trucks

If you're running a fleet of trucks, TomTom WORKsmart™ solutions can help you make significant savings. To start with, you'll be able to generate automatic reports on your drivers' mileage and working hours, saving you time and money on admin. But perhaps most importantly, we have a satellite navigation system designed especially for trucks. Not only will your drivers be shown the best way to their destination, avoiding traffic; they'll also avoid unnecessary detours down roads with restricted access for larger vehicles. All this helps your drivers arrive stress-free and on time, making late deliveries a thing of the past.

Voice of the customer: **William Hockin/Yuill&Dodds**

"Tracking and telematics are the way ahead for the transport industry, particularly with all the cost and environmental issues we have to face today. With TomTom we know we have partnered a company that constantly looks at the changing needs of operators and of the environment in which they run their vehicles, and is highly innovative in developing solutions to deal with these."

**William Hockin, Managing Director,
William C. Hockin Transport Ltd.**

WORKsmart fleet management from TomTom includes:

- Traffic avoidance
- Vehicle tracking
- Job dispatch
- Time management
- Environmental responsibility
- Management reporting

Being a lorry driver is a tough job. Long hours, stressful driving conditions and time spent alone can take their toll. It can often be a 24/7 experience too, taking hundreds of kilometres and several days to complete a delivery. On top of this, there seem to be more and more rules and regulations about working hours and breaks. Not only do you have to understand EU directives, you have to follow local legislation too. And juggling all these responsibilities can be stressful when you just want to get on with the job. TomTom WORKsmart™ solutions take some of the pressure off. We take the pain out of managing all the regulations, and use our truck specific satnav technology to make your journeys smooth and hassle-free, so you can make the most of your time on the road.

Adhere to local directives and strict SLAs

In the long haulage sector, compliance is particularly important. You have to follow local directives on driving and working hours and the implication of not adhering strictly to Service Level Agreements (SLAs) can be huge. TomTom WORKsmart™ solutions allow you to see exactly how long your drivers spend at the wheel, and who has enough hours remaining to complete the next job by displaying digital tachograph data in real-time in the office. You'll also avoid hefty late delivery fines thanks to reliable tracking reports that keep you up to date on your driver's progress every step of the way.

Track your drivers' working hours in real time

Whether you pay your drivers by the hour or the mile, accurate and reliable reporting is key. TomTom WORKsmart™ solutions let you see exactly how well your drivers are performing, thanks to real-time reports that tell you how long they spend with customers, driving and on breaks. Not only will this help boost performance, you'll also have comprehensive proof for customers that you are complying with SLAs.

Vehicle	Status	Daily total
059 - John	Work	5h30min
027 - Frank	Break	0min
111 - Peter	Work	3h51min
003 - Ralph	Work finished	0min
067 - Richard	Driving	1h19min

International deliveries made exceptionally efficient

When your drivers travel vast distances across international borders, it's important to make your operation as efficient as possible, and to be able to prove you're meeting customer demands. Our vehicle tracking system shows you the availability of all your drivers, as well as their location and an estimate of when they could arrive for a pick-up. So you can send the most suitable vehicle to get your customer's goods delivered faster. And you'll be able to show proof of your driver's arrival time and how long was spent loading or unloading.
