

# UTILITIES

## Keep staff safer, stress-free and more productive

Your best drivers are the ones who not only reach customers on time, but get there safely as well. And nothing provokes dangerous driving like stress. Thanks to our satellite navigation technology, your drivers will get advance warnings of any traffic up ahead, so they can avoid congested areas and take the best route for that time of day. The result? They won't feel unnecessarily rushed and will turn up safely on time, relaxed, and better able to do their jobs. And our vehicle tracking includes driving behavior analysis, so you can promote a safe driving style.

## Voice of the customer: Scotia Gas Networks

"A 14% drop in overtime claims since implementation has more than paid for the system, these savings coupled with cuts in admin time mean greater efficiencies and significant cost savings across our business"

**Paul Davies, Transport Manager, Scotia Gas Networks**

"The TomTom Business Solution is proving to be of great help to our control room staff in responding more effectively to customer calls and it is improving the safety of our engineers when driving between jobs ..."

**Malcolm Russell, Director of Operations at Scotia Gas Networks**

## WORKsmart fleet management from TomTom includes:

- Traffic avoidance
- Vehicle tracking
- Job dispatch
- Time management
- Environmental responsibility
- Management reporting

20101216\_VerBRO\_Utilities\_UK

If you provide public services, the customer is often the local council. With such important contracts, there's little room for error. And if you turn up late for any reason and there's a complaint, you know you're going to hear about it. TomTom WORKsmart™ solutions keep track of working hours and vehicle movements so that if a manager needs to prove the location of a staff member, they can just check the system without disturbing them. And we'll help you arrive on site faster too, so the boss is happy, the customer's happy and you can relax and get on with the job.

**Reach customers faster than ever**

When you're supplying utilities up and down the country, it can be a challenge to keep response times low. TomTom WORKsmart™ solutions give you complete control over your fleet to help you reach customers as quickly as possible. Our satellite navigation system uses live information to give drivers the best routes avoiding traffic jams and unnecessary detours. And our vehicle tracking system means you can give customers real-time updates on a driver's progress, and warn them quickly if there are going to be delays.

**Make big savings on everyday costs**

For a large fleet in the utilities sector, costs can quickly add up – for example, fuel, communication and admin. TomTom WORKsmart™ solutions can help you save money in several ways. Our efficient two-way communication system lets you send details instantly to a group of drivers without making costly mobile phone calls. Through smart job dispatch you can save considerably on daily mileage, resulting in reduced fuel costs. And our driving behavior management and fuel efficiency reporting help you to further drive down fuel cost.

**Prove your safety, reliability and green credentials**

If you have important contracts with local authorities and a strong reputation to uphold, compliance is key. TomTom gives you all the information you need to show you're meeting even the most stringent demands. Our automated reports give you detailed proof of your drivers' locations, journey times, stops made, and time spent with customers – all at the touch of a button. Fuel consumption and carbon footprint reporting helps you prove your success in reducing your environmental impact.
